Designed to fit unique anatomies

Shiley™ XLT extended-length tracheostomy tubes

Unusual anatomies pose unique challenges.

Some patients may require extra-long tracheostomy tubes to achieve a proper fit, including those with:

- Full or thick necks¹
- Long tracheal anatomies¹
- Tracheal stenosis¹
- Malacia¹

The flexibility of Shiley™ XLT tracheostomy tubes conform to these types of anatomies and provides a range of extra lengths where you need it:

- Extra proximal length, cuffed and cuffless options, for patients with full or thick necks
- Extra distal length, cuffed and cuffless options, for patients with long tracheal anatomies, tracheal stenosis, or malacia

Shiley™ XLT tracheostomy tubes feature a flexible, disposable inner cannula that conforms to the outer cannula to promote a precise fit. A specialized locking ring securely fastens the inner cannula to the outer cannula.

Full or thick neck

Choose Shiley™ XLT tracheostomy tube with proximal extension (XLTCP or XLTUP).

Long tracheal anatomies, tracheal stenosis, or malacia

Choose Shiley™ XLT tracheostomy tube with distal extension (XLTCD or XLTUD).

This diagram illustrates how the proximal, radial, and distal measurements are determined for sizing.

Shiley™ XLT extended-length tracheostomy tubes feature:

- Four adult sizes, cuffed and cuffless, with proximal or distal extension
- Flexible, disposable inner cannula that conforms to outer cannula shape
- Twist-lock mechanism that easily secures inner cannula
- Flexible, thermosensitive outer cannula that more readily adapts to unusual anatomies
- Outer cannula tip-to-tip radiopaque line to facilitate desired tube positioning
- Flexible, soft, free-swiveling neck flange that may improve patient comfort and provide easy inspection of stoma site; labeled with I.D., O.D., length, proximal or distal, cuffed or cuffless
- High-volume, low-pressure cuff
- ISO sizing that matches actual I.D. of inner cannula
- 100% latex-free material
